

Tattoo Aftercare

Daily Care:

- Clear bandage can remain on for 8-24 hours. A collection of blood &/or fluids under the bandage is normal. It is okay if you take this off early. Remove carefully.
- To remove the bandage, gently pull in the direction of hair growth. Soaking bandage in the shower with warm water may help loosen the adhesive.
- Gently wash your tattoo with unscented antibacterial soap, cool water, & your fingertips.
- Keep new tattoos moist with a thin layer of Aquaphor, Tatwax, or other approved aftercare twice daily for 2 weeks. Make sure to wash hands before applying aftercare.
- Then switch to an unscented lotion, & apply twice daily for another 2 weeks.
- After your tattoo has healed you can continue to use lotion and sunscreen to keep the tattoo looking its best over time.

Things to avoid:

- Unsanitary conditions
- Pools
- Spas
- Baths
- Direct sunlight
- Tanning beds
- Picking
- Scratching
- Scented products
- Vaseline

Additional Information:

- The healing process of your new tattoo is very important & greatly affects the healed product.
- Once healed, your colors may brighten, some may soften, ect. If a touch-up is needed, the first is free & can be scheduled after 30 days. (Free touch-up excludes foot and hand tattoos.)

*Medical attention should be sought if a severe allergic reaction occurs.
